

55m WallyPower Mega Yacht Concept

Published May 19th, 2006 in Yachting.

This mega yacht was designed by Wally of Monaco and is still in the early stages of design. The cruising speed of this mega yacht is 17 knots, and is steadily kept also in rough seas thanks to the unique hull design. The advanced anti-rolling system VT Naiad Marine Stabilization at Anchor combined with the DATUM control system, stabilises the 55m WallyPower both under way and at anchor making it a very smooth yacht to sail on. There is currently no information regarding production.

From Wally.
